Which keywords are supported with dependencies?

Dependency keywords

Written by Natalie
Updated over a week ago

We support the following keywords added to a card's title or description to make an issue or pull request block another issue or pull request:

- blocks, block
- required by
- needed by
- dependency of

We support the following keywords added to a card's title or description to make an issue or pull request blocked:

- blocked by
- requires, require
- need, needs
- depends on

All of the keywords must be followed by the issue's number.

For example this will work:

- blocks #33

This will NOT work:

- blocks 33
- keywords added to a comment

Note: The keyword you use will display in the issue's detail modal. *Requires* and *required by* will always be the display words on the card view.

**Don't see this feature on your Waffle board? You may be on our [legacy account](). We'd love for you to start a trial to checkout all the goodies you're missing like this one! Contact us ([support@waffle.io]()) to start a free trial.*
