

Building Spring MicroServices

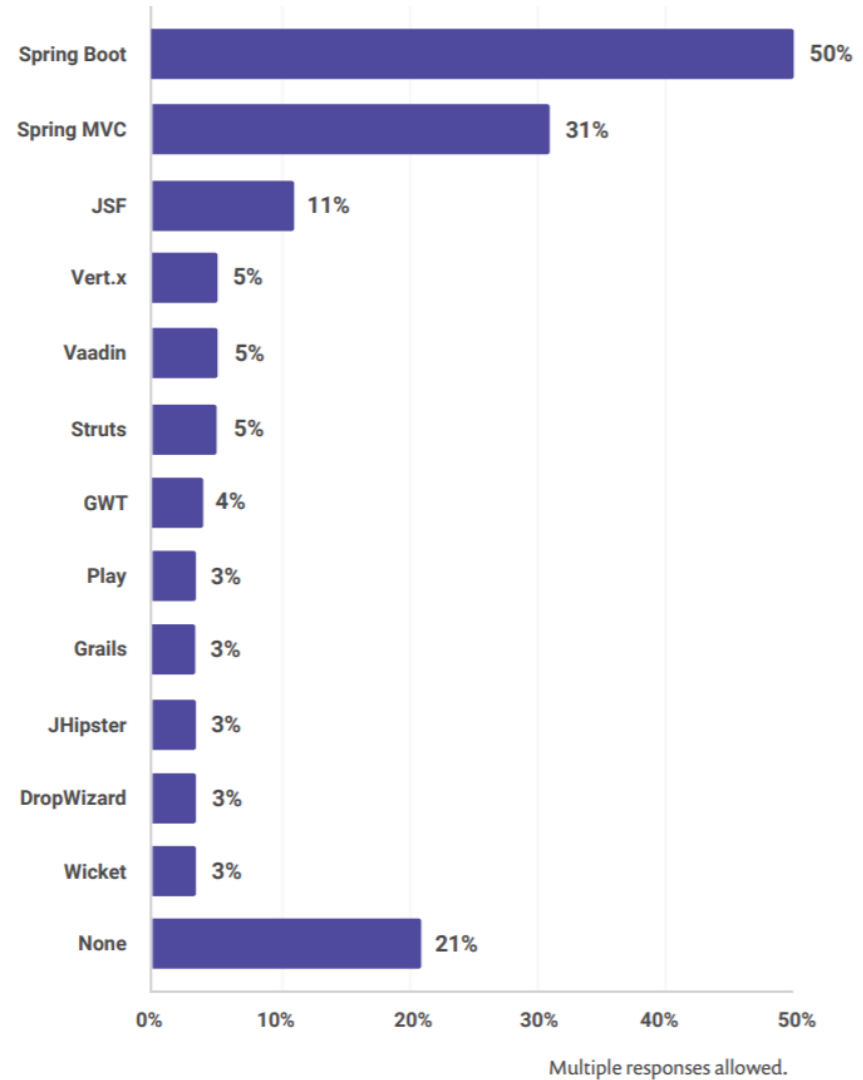

Rory Preddy - @RoryPreddy

Who Am I?

Rory works in the Developer Relations team at Microsoft as a Senior Cloud Advocate for Java.

Spring is Everywhere

Spring's focus on **speed**, **simplicity**, and **productivity** has made it the world's most popular Java framework.

Build Service Independently

Be productive through app lifecycle

Super Charge

Run Applications globally

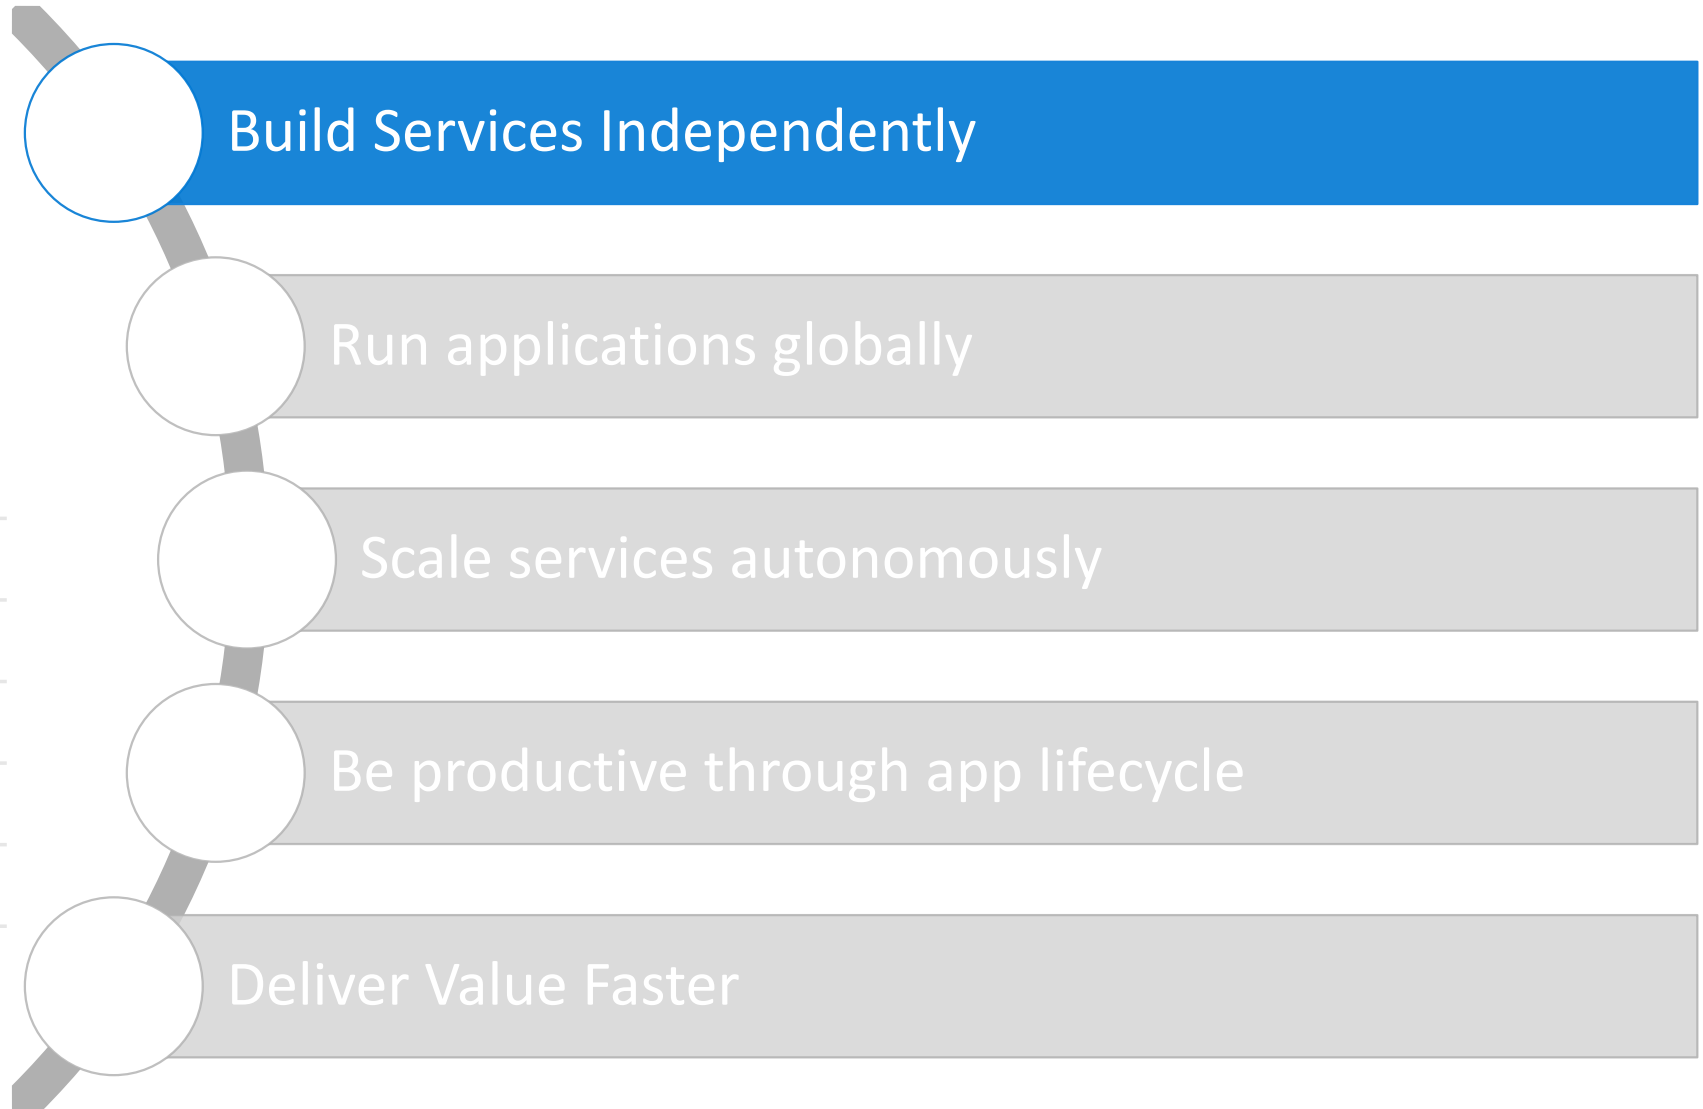

Scale services autonomously

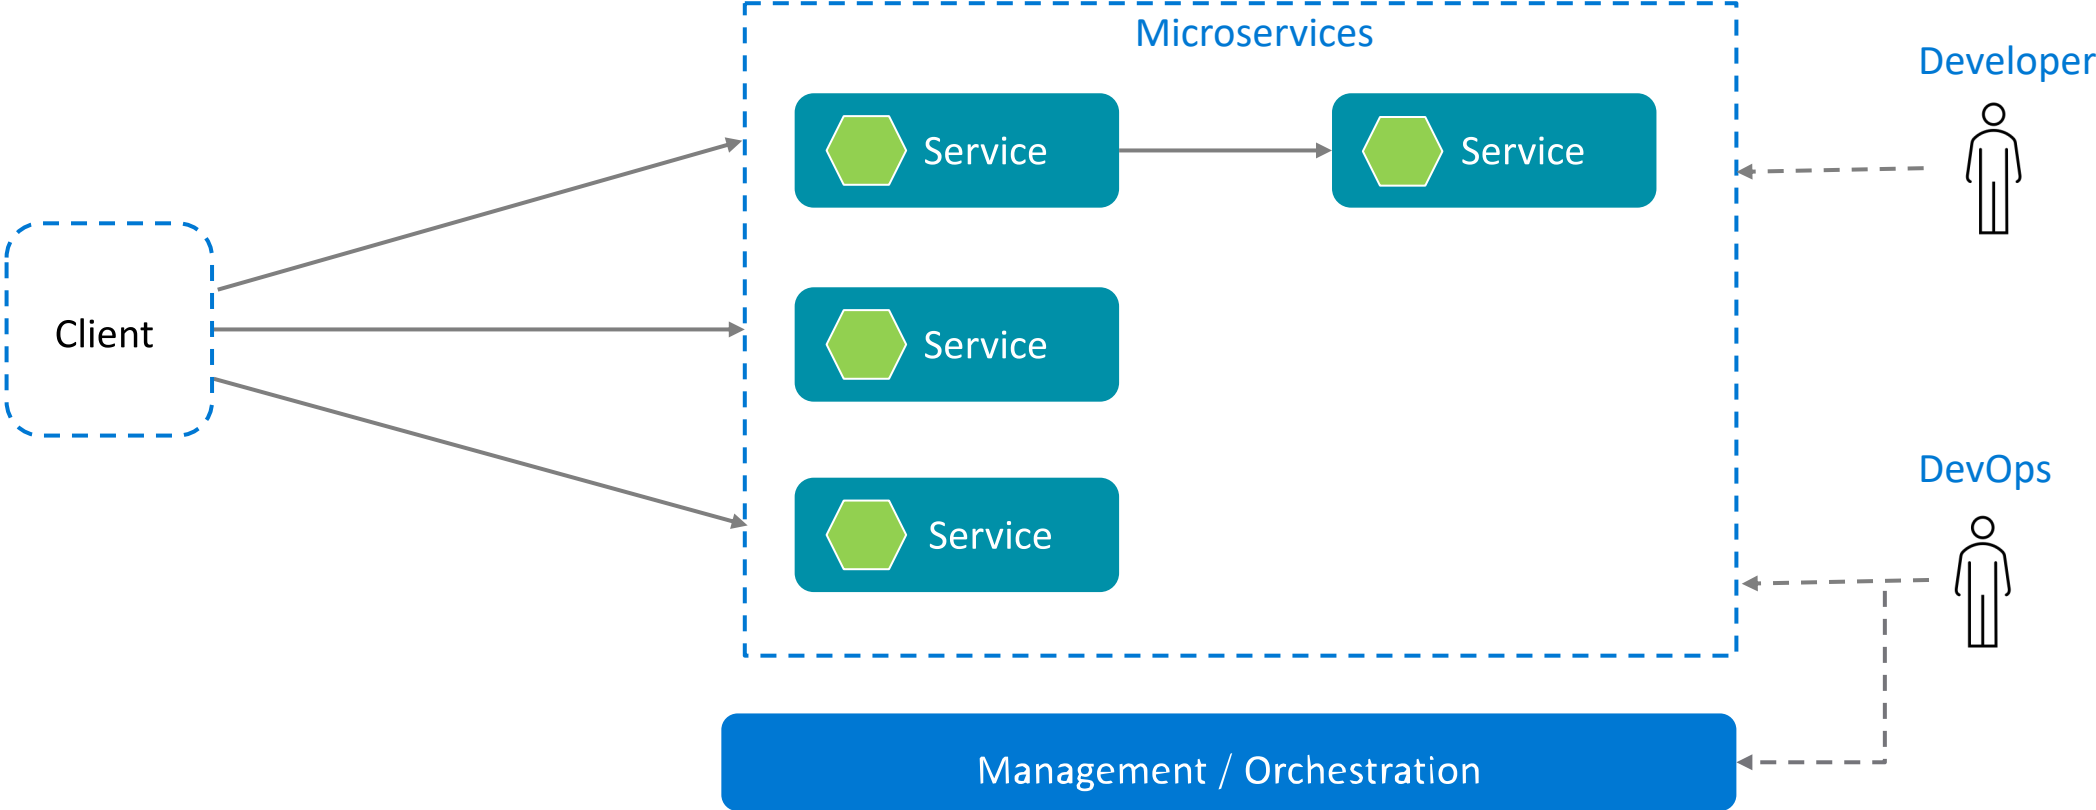

Deliver Value Faster
"Time to market"

How?

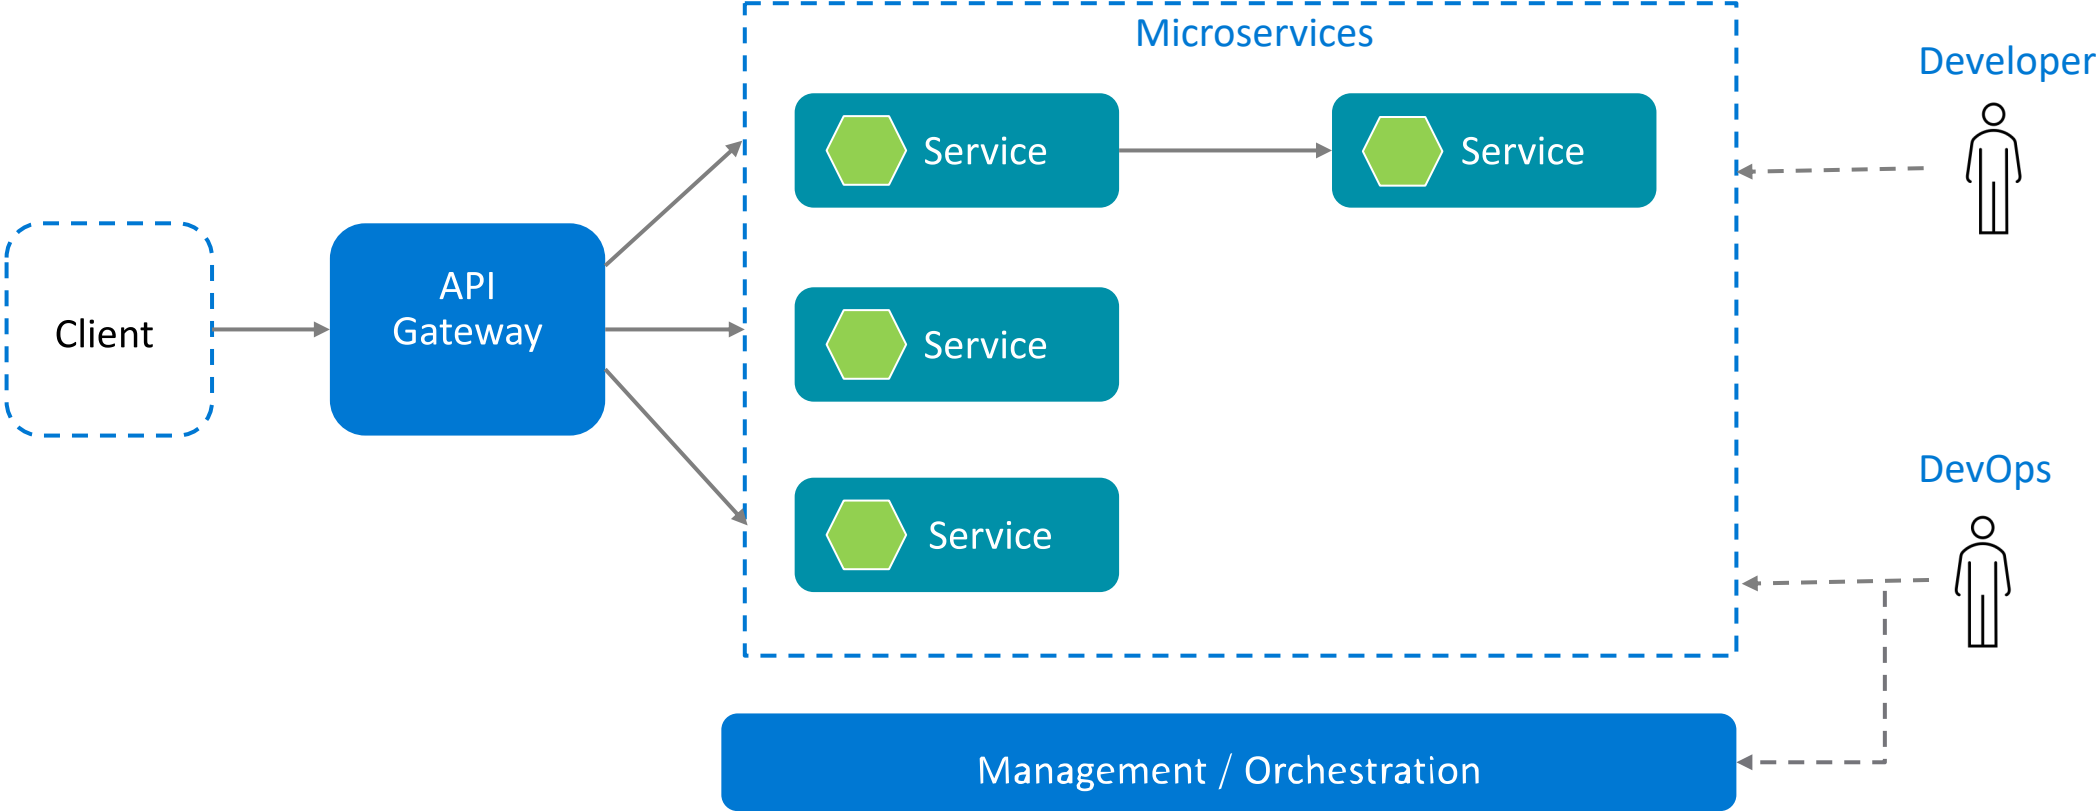

Microservice

Microservices are a popular architectural style for building applications that are resilient, highly scalable, independently deployable, and able to evolve quickly.

Microservice

Microservices are a popular architectural style for building applications that are resilient, highly scalable, independently deployable, and able to evolve quickly.

How?

Build Services Independently

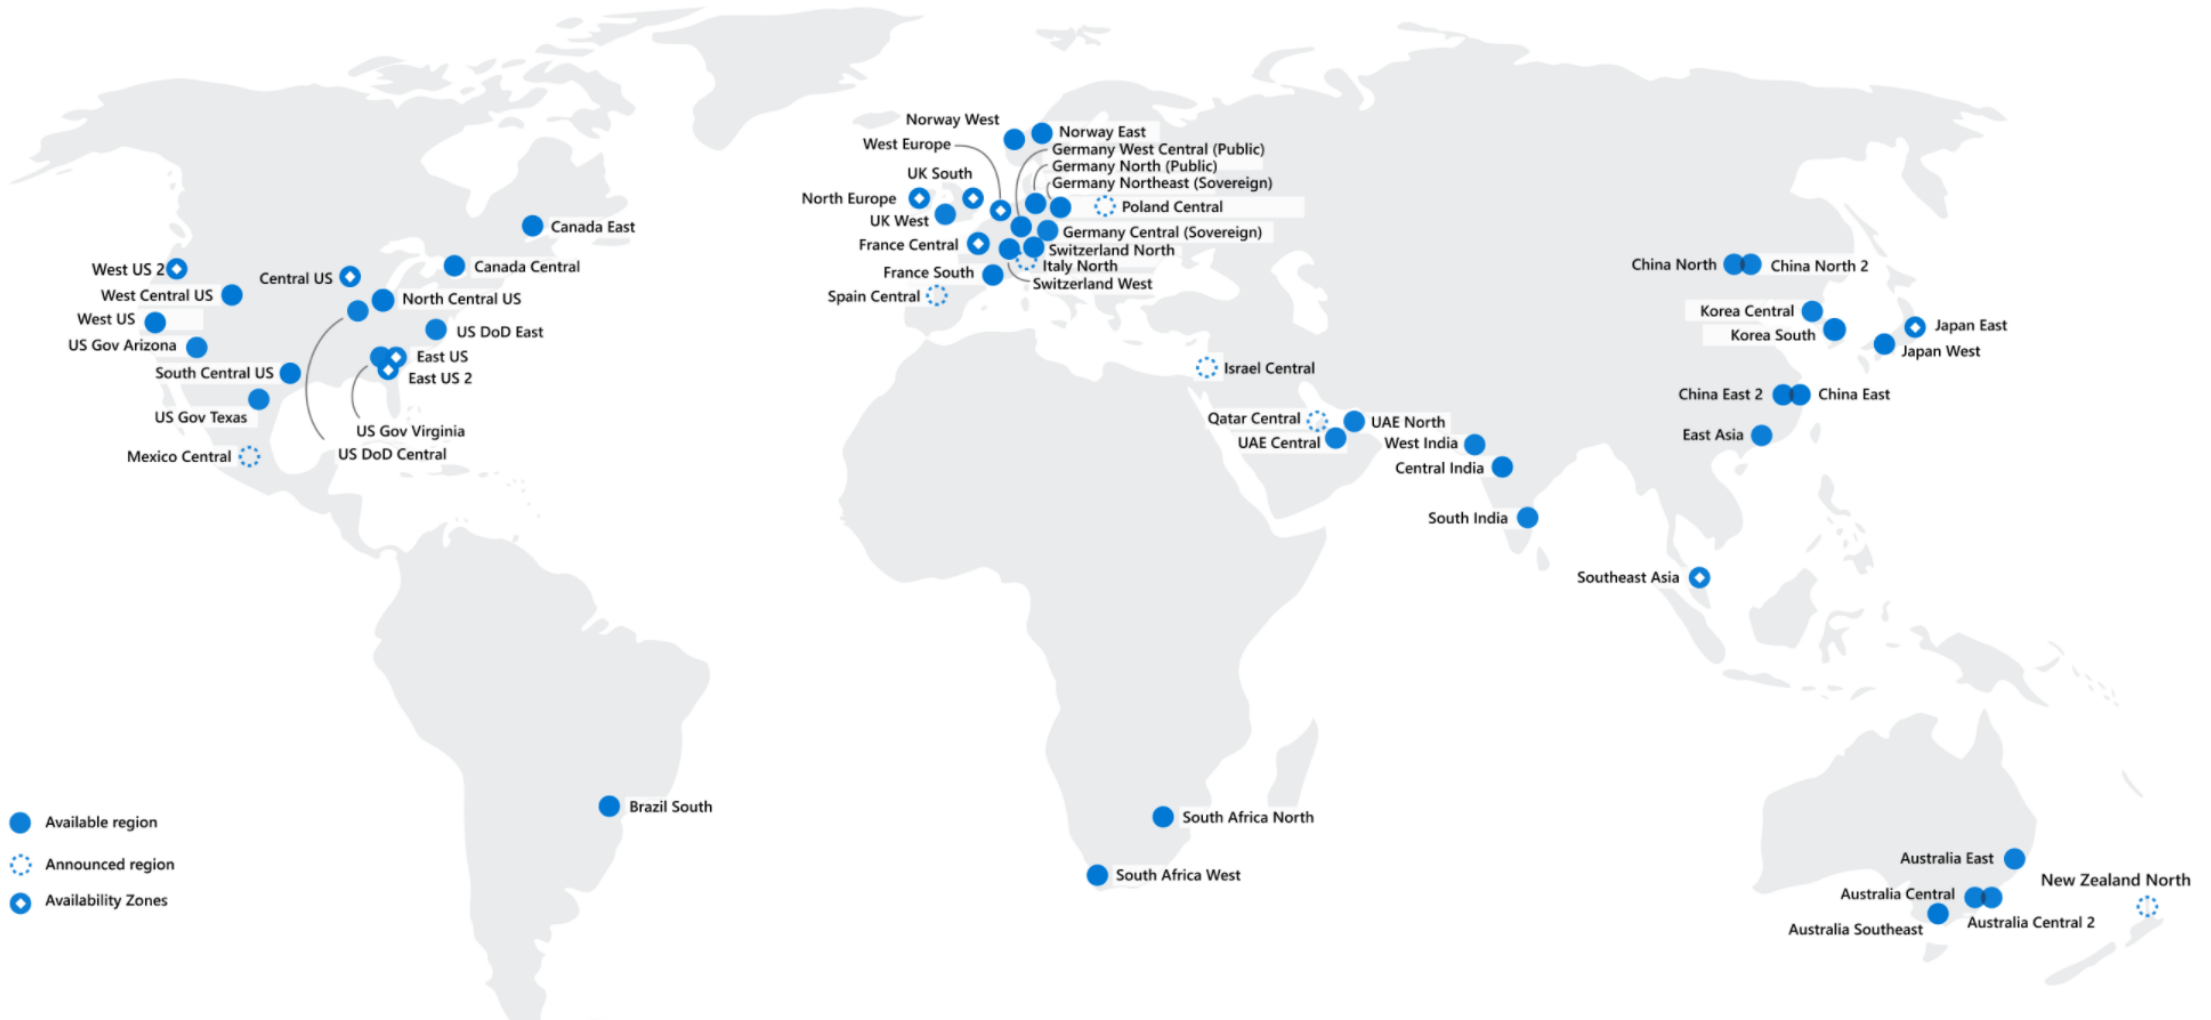

Run applications globally

Scale services autonomously

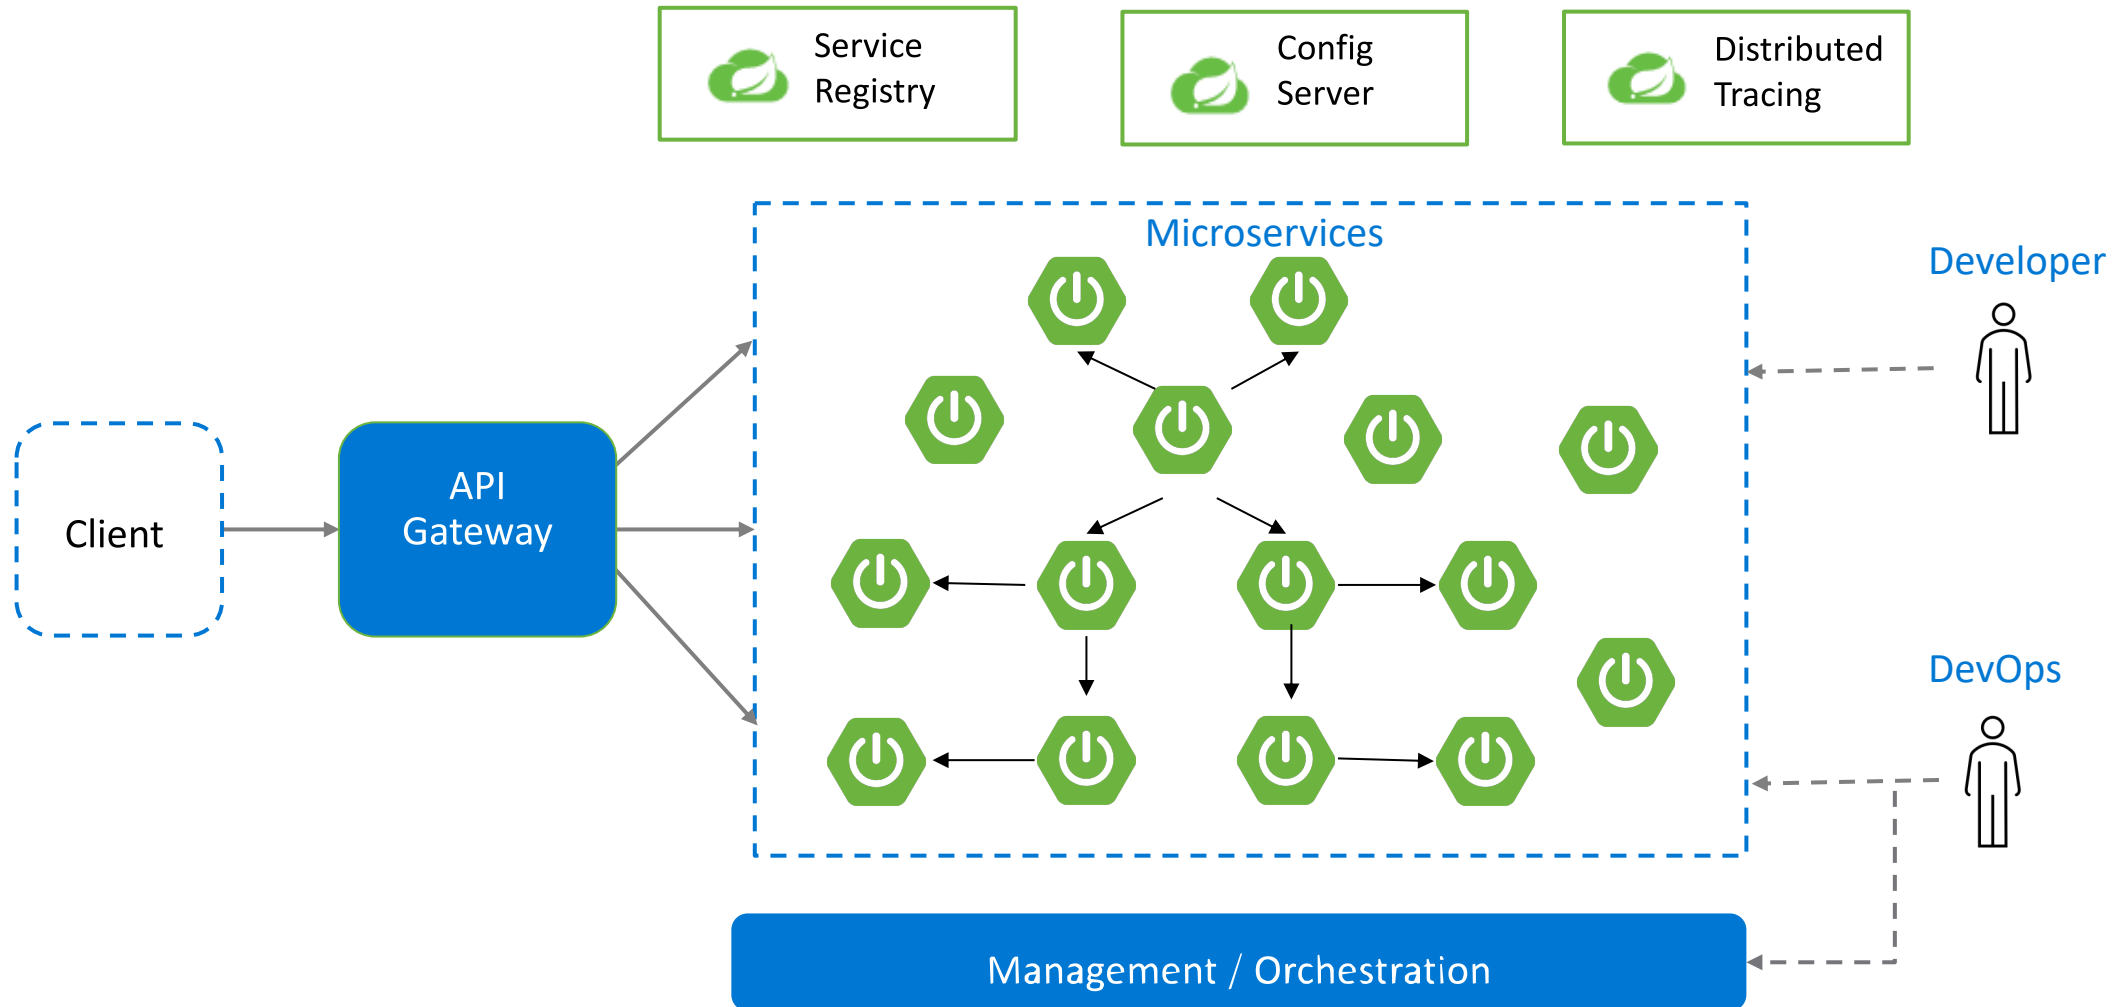

Be productive through app lifecycle

Deliver Value Faster

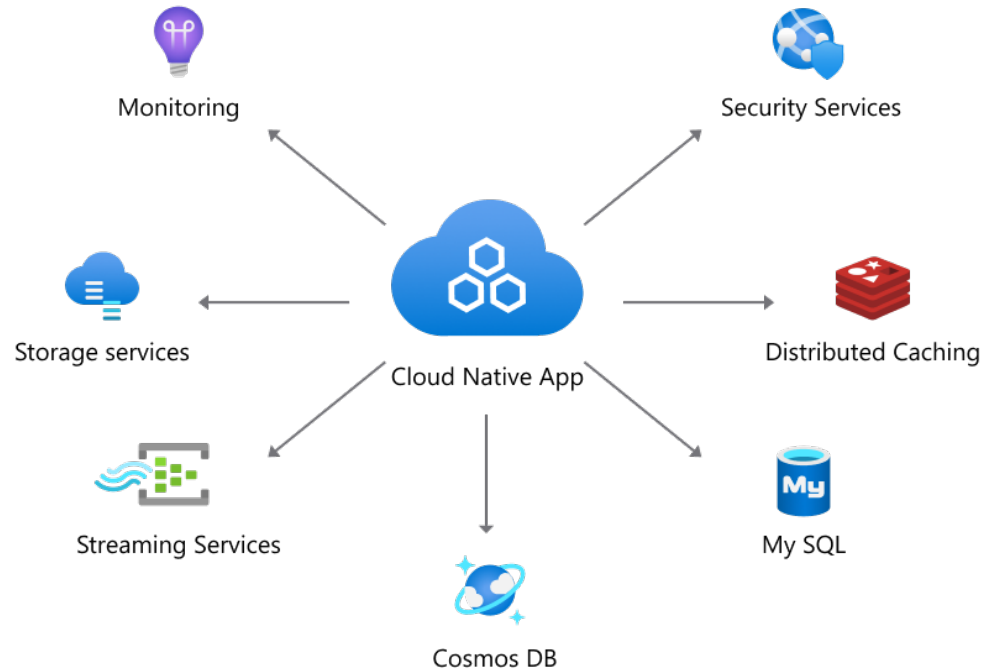

Get the most in the cloud

Spring Cloud is Your Platform

Seamlessly Integrate w/ Cloud Services

- Spring starters for Azure simplifies connection and consumption of Azure services under the Spring framework.
- Developers can adopt a **Spring-idiomatic** way to take advantage of managed services on Azure, with only few lines of configuration and minimal code changes.
- Close collaboration between Microsoft and VMware Spring engineers.

Landscape of Spring Azure Ecosystem

Spring Cloud

App Configuration
Event Hubs
Service Bus
Storage
Redis
Functions

R2DBC

Azure SQL
PostgreSQL
MySQL

Spring Data

Azure SQL
MySQL
PostgreSQL
Maria DB
Cosmos DB

- SQL
- MongoDB
- Cassandra
- Gremlin

Spring Security

Active Directory (AAD)
AAD B2C
Key Vault

Spring Cache

Redis Cache

Spring Resource

Storage

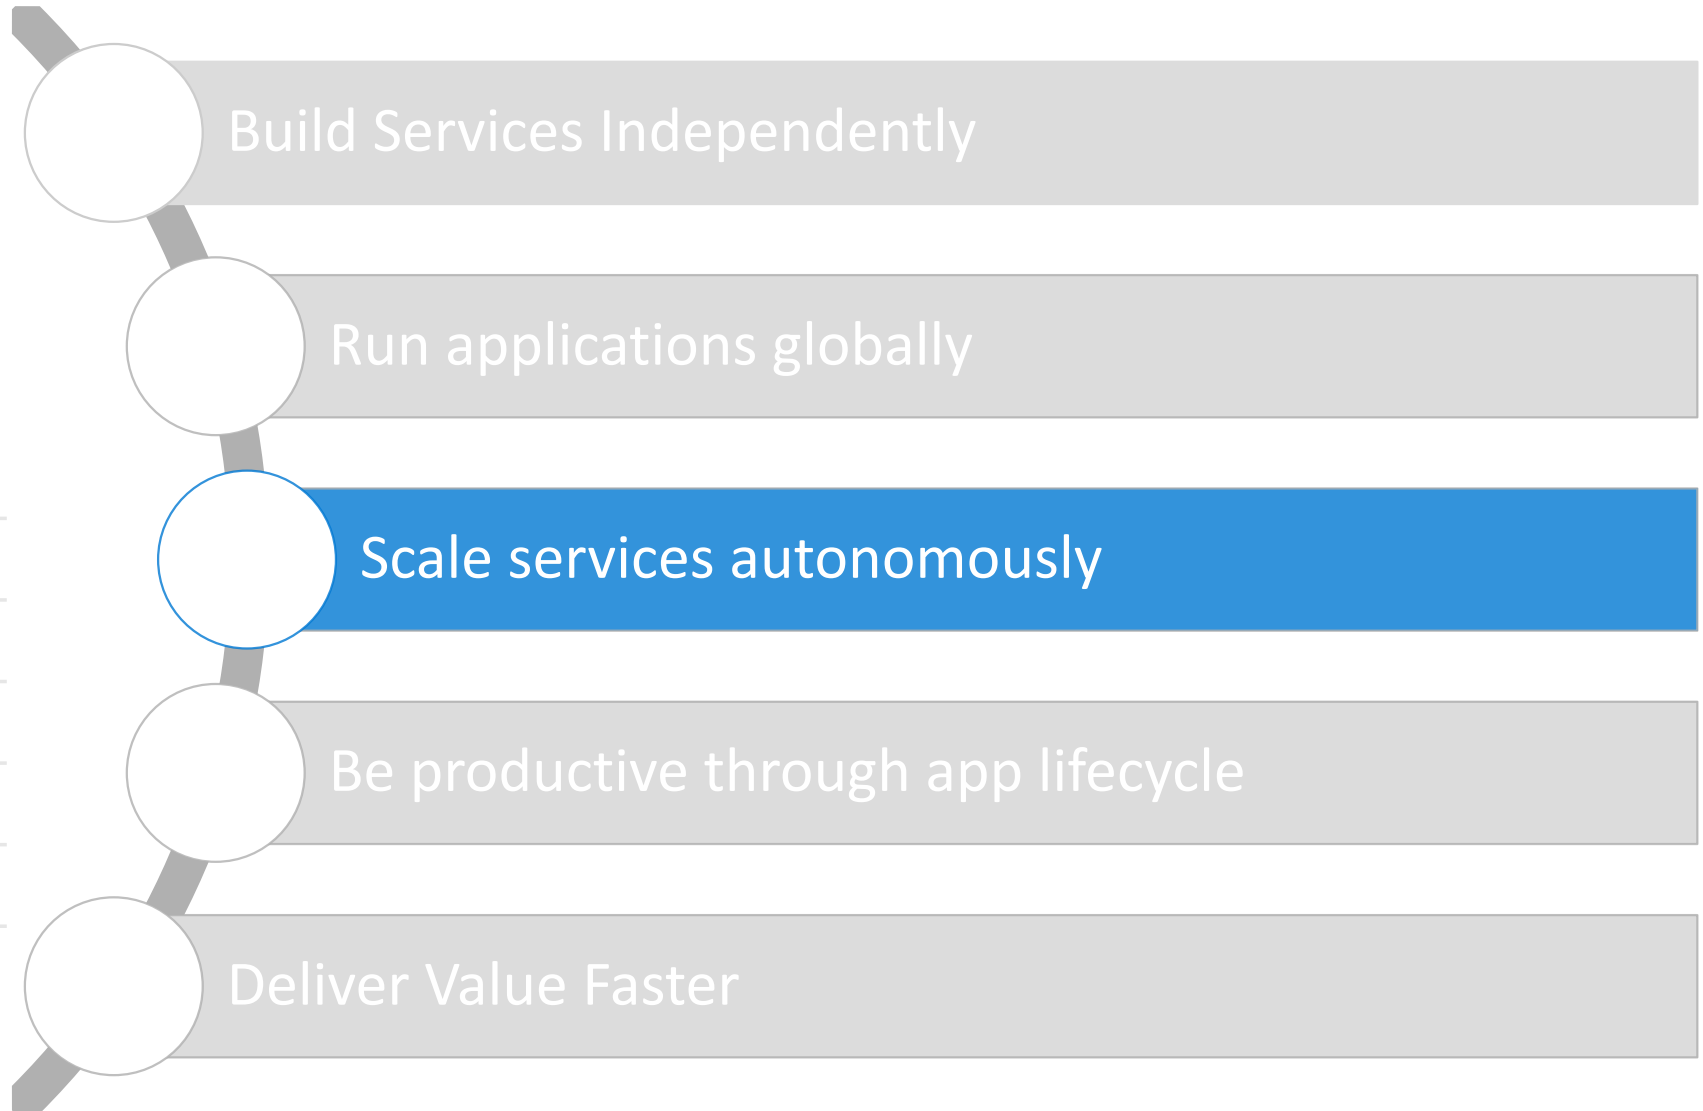

Spring Messaging

Service Bus

Micrometer

Monitor (includes
Log Analytics)

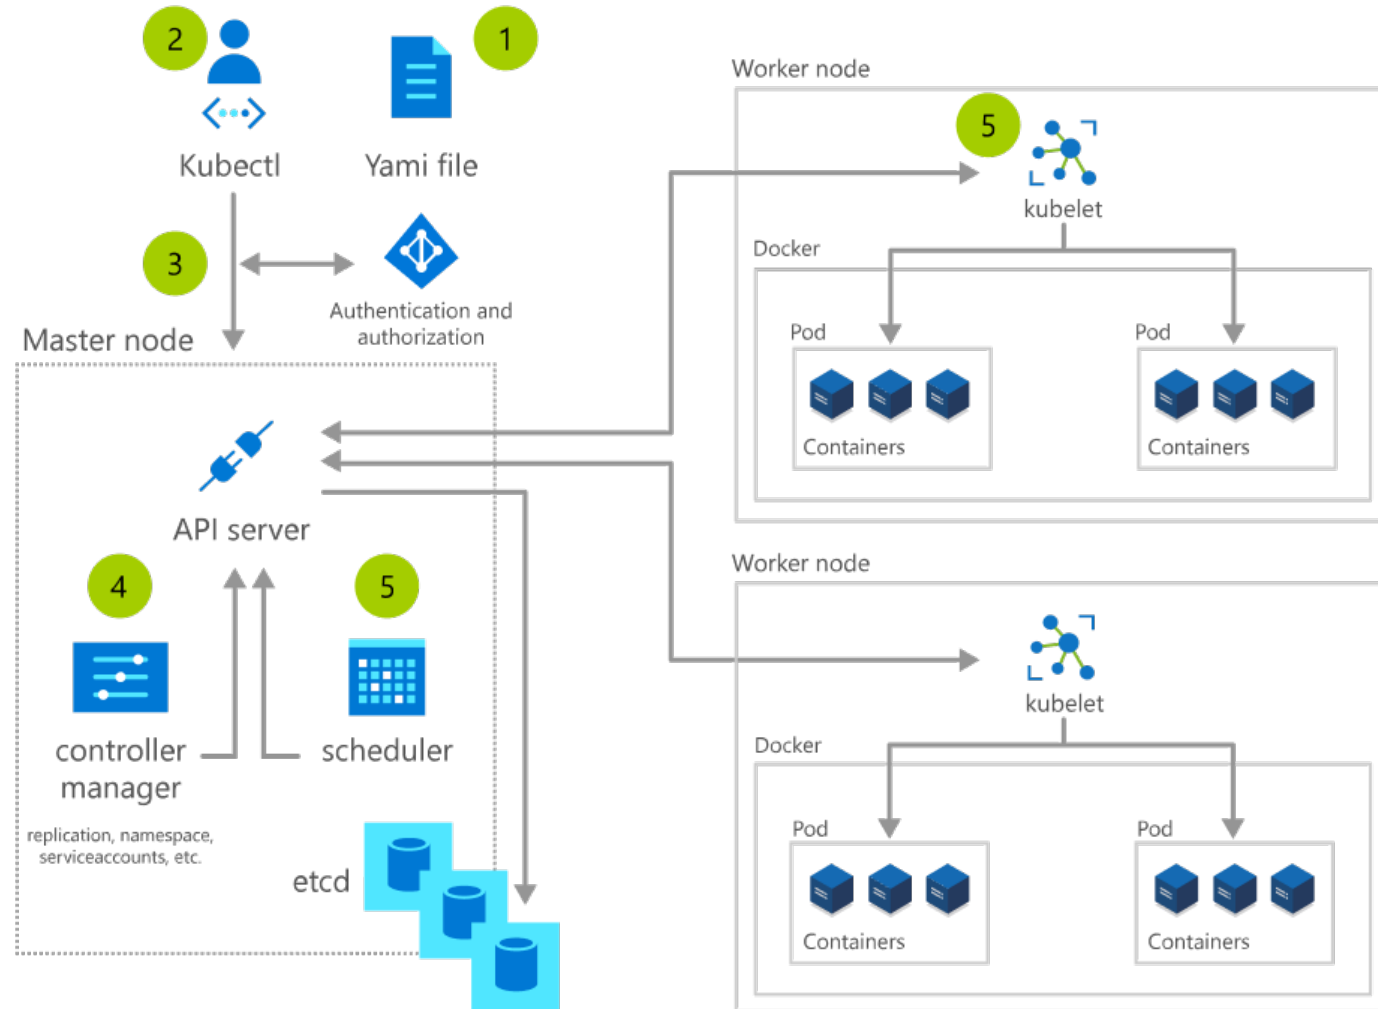

How?

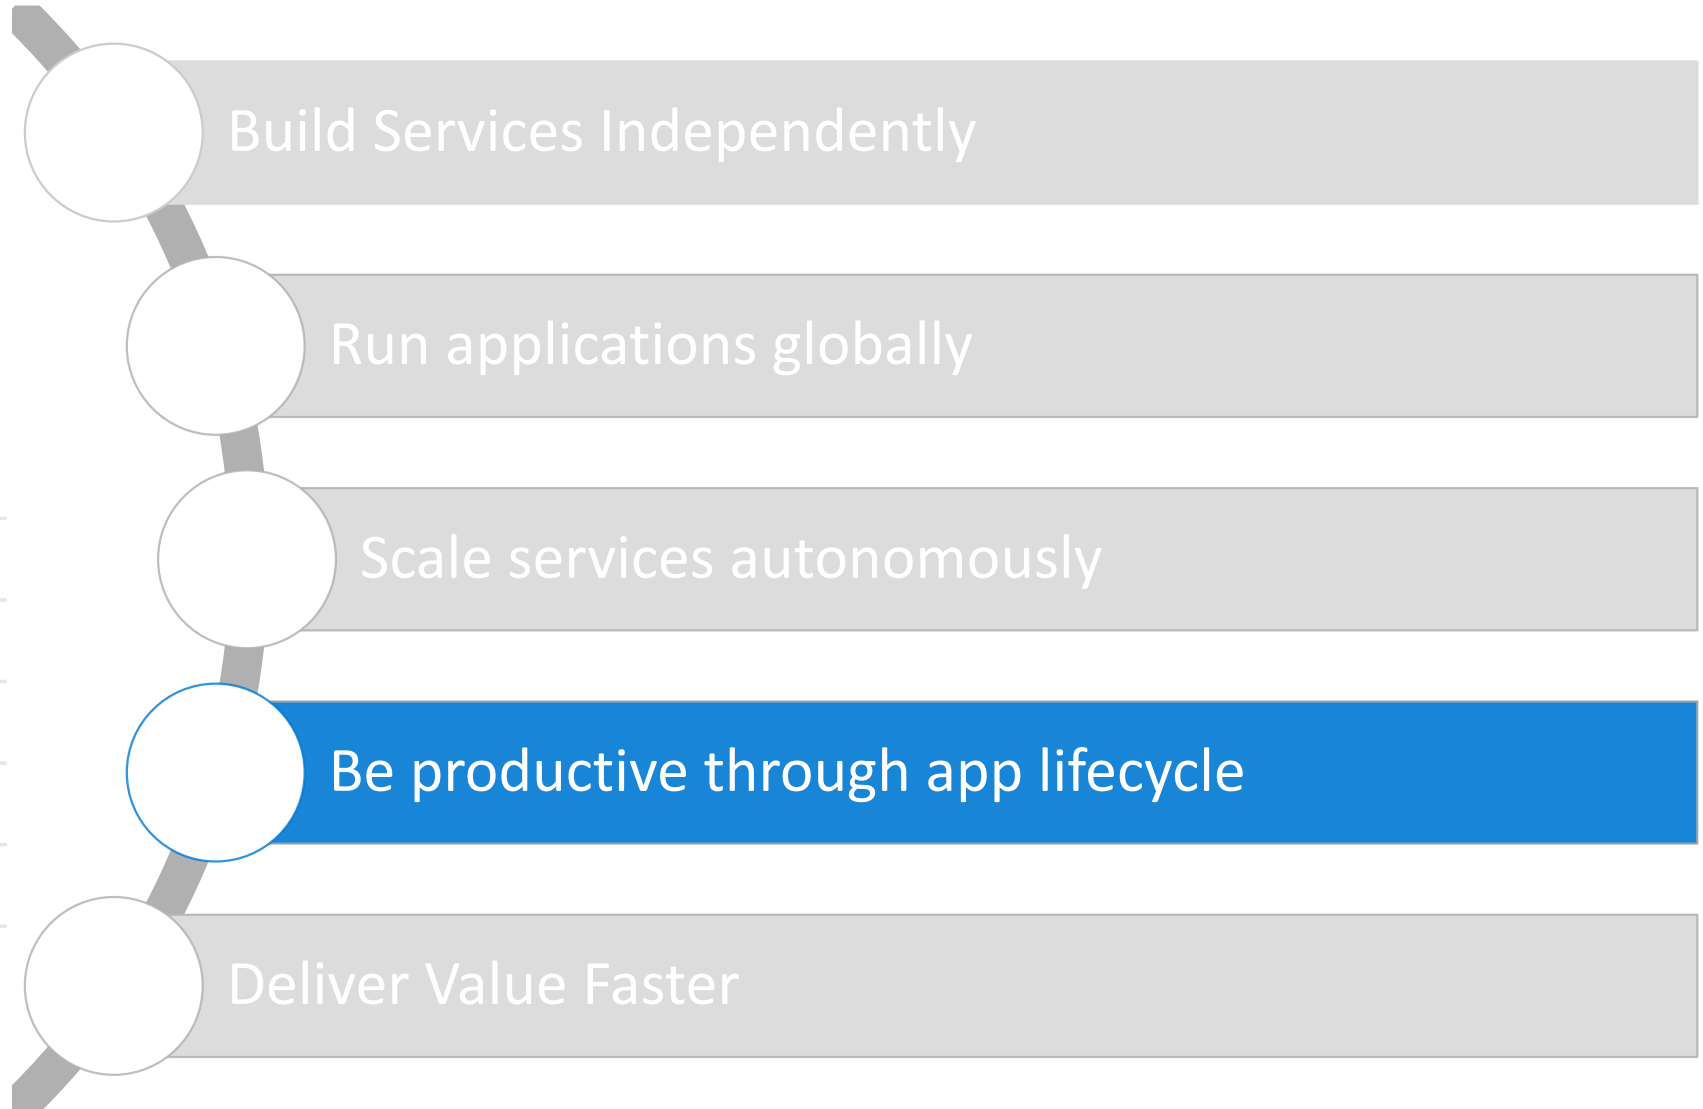

Orchestrate Microservices w/ Kubernetes

Deploy and manage
containerized applications
(microservices) at scale
Rapid growing ecosystem

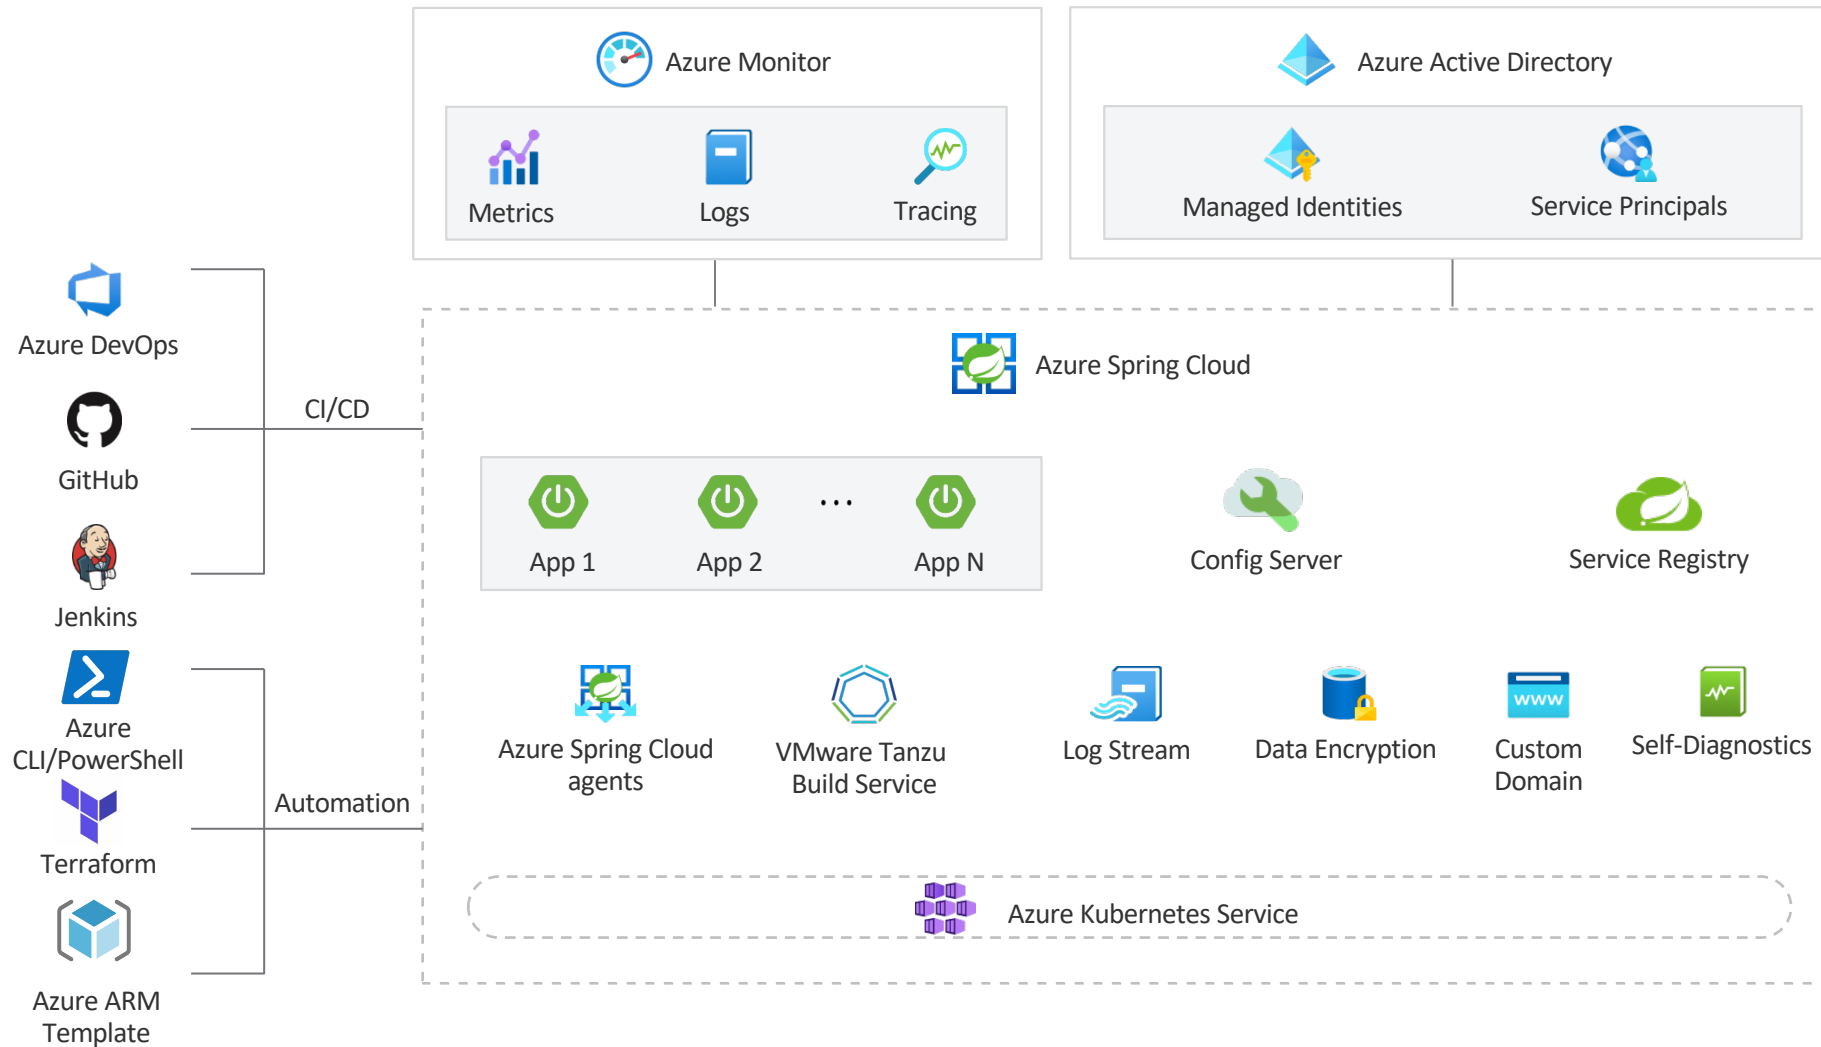

Kubernetes services, support,
and tools are widely available

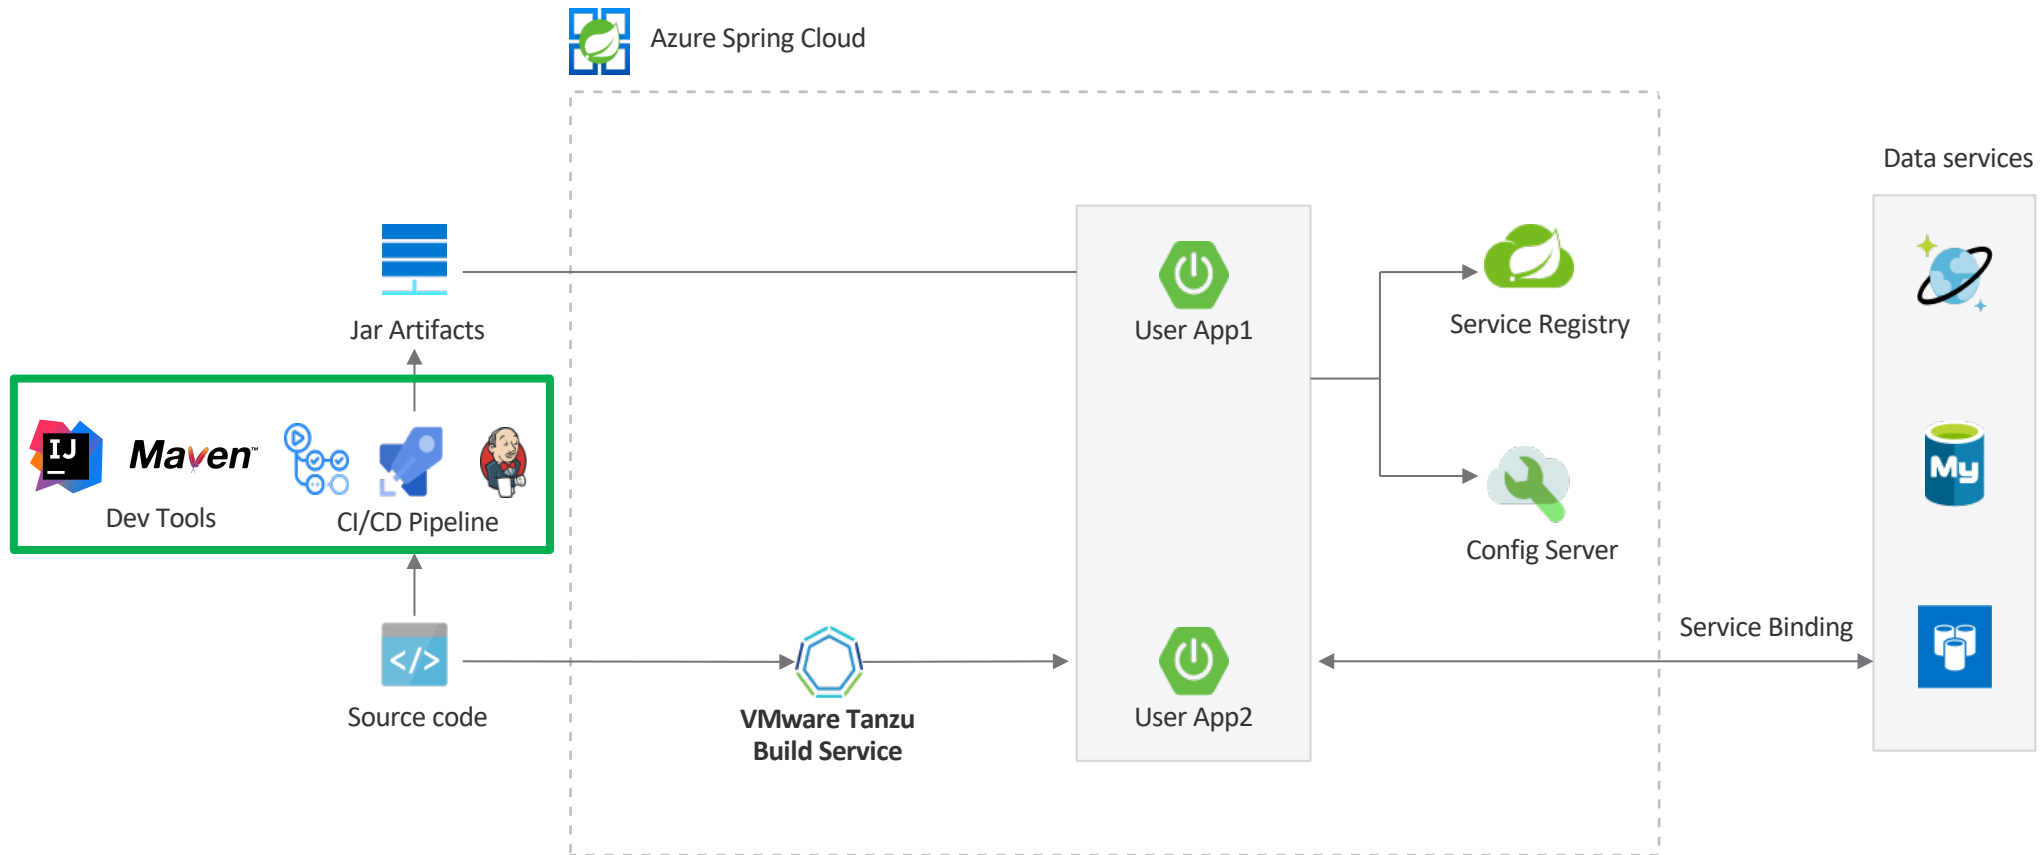

How?

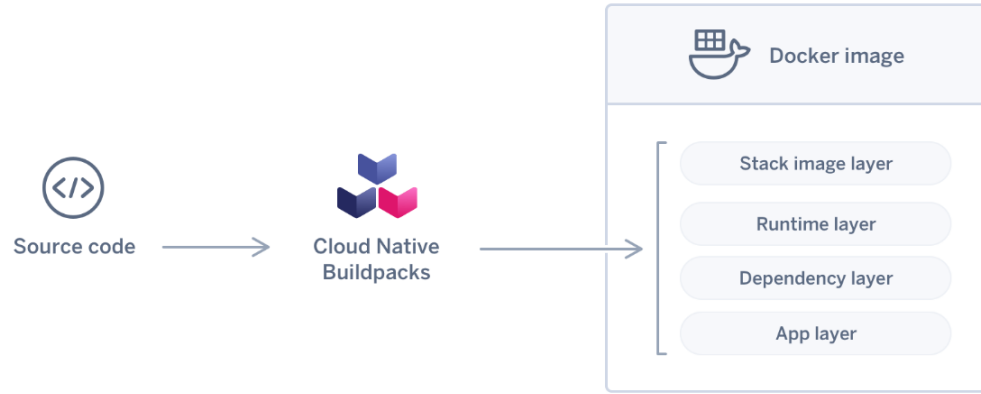

Go Azure Spring Cloud

Accelerate Development

Source Code to Container

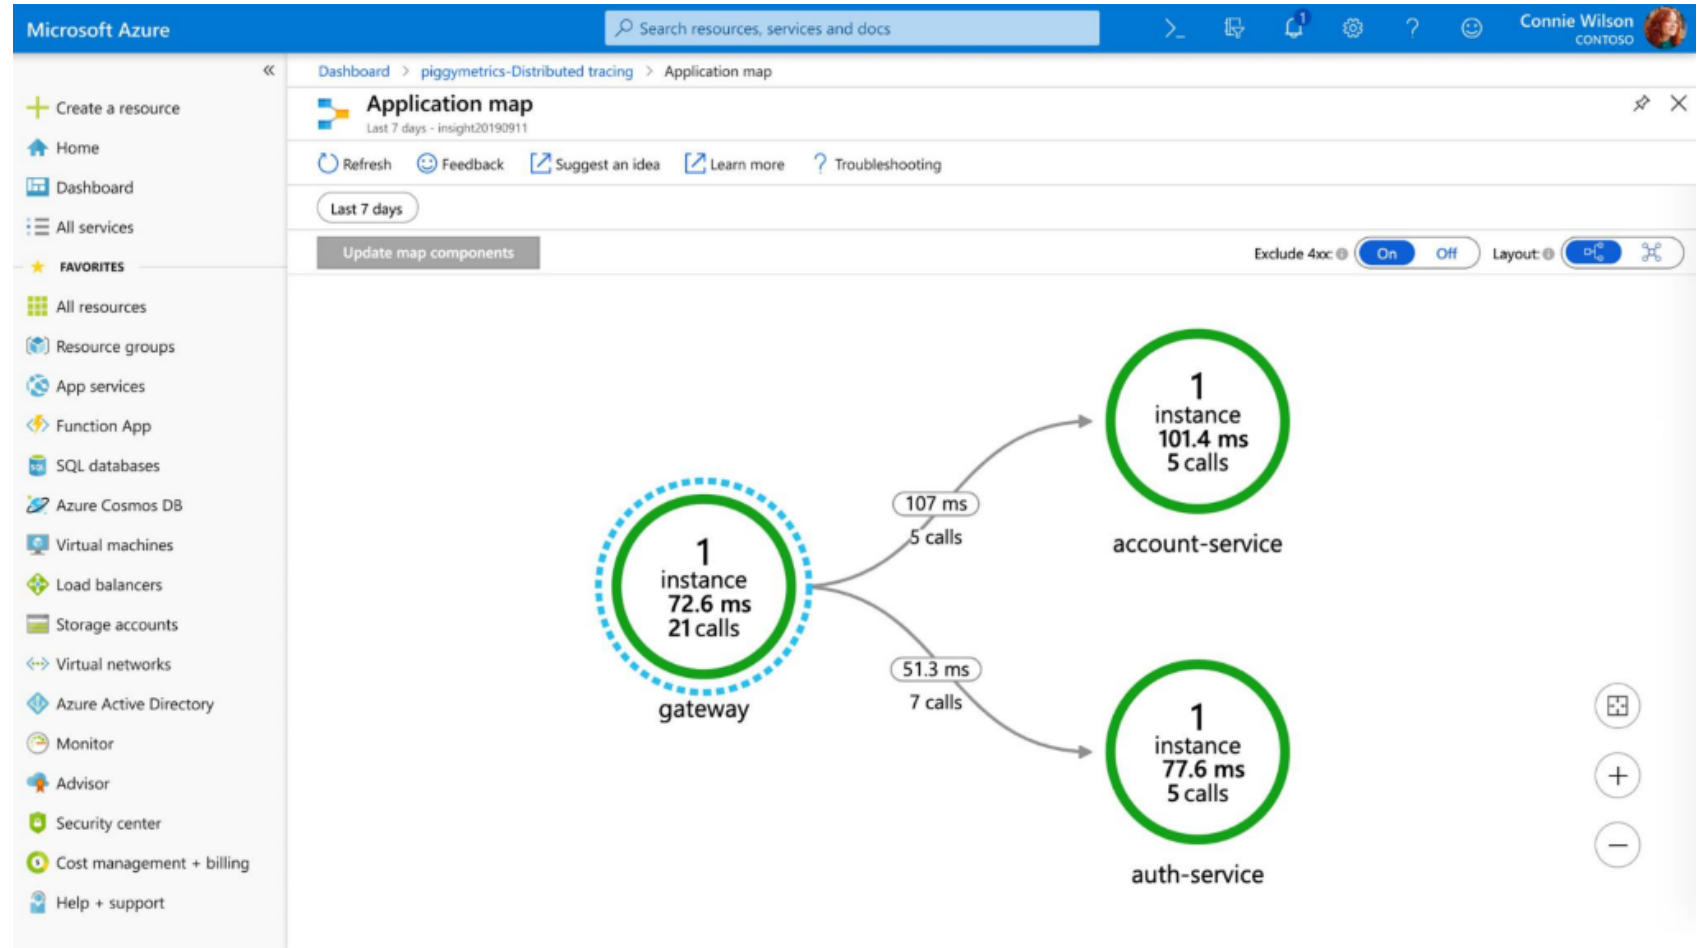

```
Azure Cloud Shell
Bash
spring-boot: java -cp $CLASSPATH $JAVA_OPTS com.microsoft.sample.java8ASCDemo.Java8AscDemoApplication
task:         java -cp $CLASSPATH $JAVA_OPTS com.microsoft.sample.java8ASCDemo.Java8AscDemoApplication
web:         java -cp $CLASSPATH $JAVA_OPTS com.microsoft.sample.java8ASCDemo.Java8AscDemoApplication

Pivotal Spring Auto-reconfiguration Buildpack 1.0.85
Spring Auto-reconfiguration 2.11.0: Contributing to layer
Reusing cached download from buildpack
Copying to /layers/io.pivotal.springautoreconfiguration/auto-reconfiguration
Writing CLASSPATH to launch
Adding layer 'app'
Adding layer 'config'
Adding layer 'launcher'
Adding layer 'io.pivotal.zulu:class-counter'
Adding layer 'io.pivotal.zulu:java-security-properties'
Adding layer 'io.pivotal.zulu:jvmskill'
Adding layer 'io.pivotal.zulu:link-local-dns'
Adding layer 'io.pivotal.zulu:memory-calculator'
Adding layer 'io.pivotal.zulu:openjdk-jre'
Adding layer 'io.pivotal.zulu:security-provider-configurer'
Adding layer 'io.pivotal.jvmapplication:executable-jar'
Adding layer 'io.pivotal.springboot:spring-boot'
Adding layer 'io.pivotal.springautoreconfiguration:auto-reconfiguration'
