B.1. Minor differences (全)

The width of the top horizontal line should be a typeface design decision, not worth dedicating new glyphs for TW. See also U+9293 𨮑, U+8DE7 𨮑, U+8F07 𨮑, U+6D24 𨮑, U+5168 全 and U+4F7A 佺 - JP glyphs are used for TW. This is unlike the component 分 or 八 where a separate glyph set is provided for TW.

B.2. Minor differences (癸)

The only difference is that the last stroke of 天 touches the second last stroke in uni9368-HK. Probably not worth a separate glyph. See also U+4906 𠄎 (dedicated HK glyph), U+63C6 𠄎 (uses JP glyph), U+8067 𠄎 (uses TW glyph) - they are all designed with the strokes touched.

B.3. Minor differences (求)

The only difference is whether the 4th stroke of 求 touches the vertical stroke with hook. After checking a few fonts from type foundries that produce Simplified Chinese typefaces, I believe this should be a pure design choice and a separate design for CN is not necessary. Also see U+6344 𠄎, U+6882 𠄎, U+688F 𠄎, U+76DA 𠄎 and U+86F7 𠄎 - JP glyphs are used for CN.
