

Celo Governance Call #11

September 9, 2021

Quick Updates

- Update on Proposal 32 and Proposal 33: These have already been submitted on-chain and are moving to referendum soon.
- CGP 0033 ([Link](#)) and CGP 0034 ([Link](#)): These will be submitted next Tuesday and hit referendum next Thursday.

CGP 0039: Increase Block Target Density ([Link](#))

- Summary: Proposes an increase of block's target density (from 0.5 to 0.8) to increase transaction throughput & block space usage.
- Why It's Needed: There's no real benefit to having a lower block density, so we want to increase it to allow more transactions to move through the network. If we set it to 1.0, it wouldn't work with EIP-1559 changes, so 0.8 is a good balance.
- Discussion Summary:
 - There was discussion over the Donut hardfork's implications for this proposal, and there will be a follow-up in the [forum discussion](#).
 - Expected to be proposed on-chain soon, possibly next Tuesday (9/14).
