

**EtreCheck version:** 6.1.6 (6B038)  
**Report generated:** 2019-12-15 05:05:17  
**Problem:** No problem - just checking

---

## How to use EtreCheck

Your EtreCheck report provides diagnostic and debugging information about your Macintosh. It can uncover the most common problems that plague Mac users. These issues are listed in the first two sections covering **major** and **minor** problems. Major problems need to be corrected immediately. These could involve malware, personal safety, or possible loss of data. Minor problems are frustrating issues or opportunities for improvement, but do not require immediate attention.

**Note:** Your EtreCheck report is still useful even if it reports no problems. An EtreCheck report listing no problems means there are dozens of potential problems that you don't have.

Scroll down for more pages covering additional details about your computer and links to external resources from Apple and other sources.

The last page is a plain text version of your EtreCheck report. If you need help, you can post this text report on an internet support forum like **Apple Support Communities**. This text report automatically hides any personal information to protect your privacy.

---

## Major Issues

These are major issues identified by EtreCheck. Anything that appears on this list needs immediate attention. If you cannot resolve these issues by yourself, contact **Apple Support** or post a question on **Apple Support Communities** and include your EtreCheck report.

<b>Unsigned files</b>	There are unsigned software files installed that could be adware and should be reviewed.
<b>Gatekeeper disabled</b>	Gatekeeper security protection is disabled. This computer is at risk of malware infection.
<b>Apple security disabled</b>	Apple security software is disabled. This computer is at risk of malware infection.
<b>More than one antivirus app</b>	This machine has multiple antivirus apps installed.

---

## Minor Issues

These are minor issues identified by EtreCheck. These issues do not need immediate attention but they may indicate future problems or opportunities for improvement. If you cannot resolve these issues by yourself, post a question on **Apple Support Communities** and include your EtreCheck report.

<b>Heavy RAM usage</b>	Apps are using a large amount of RAM.
<b>Heavy network usage</b>	This machine has recently restarted and has high network usage.
<b>Clean up</b>	There are orphan files that could be removed.
<b>System modifications</b>	There are a large number of system modifications running in the background.
<b>Runaway user process</b>	A user process is using a large percentage of your CPU.
<b>32-bit Apps</b>	This machine has 32-bits apps will not work on macOS 10.15 "Catalina".

---

## Machine

**Name:** iMac (Retina 5K, 27-inch, Late 2015)

**Model:** iMac17,1

Basic information about your machine. **Name** is Apple's marketing name for your machine. **Model** is the internal name for your machine's architecture. Several machines may share a model, so this is not a unique identifier. Also included are links to Apple support resources for your specific machine and geographic region.

---

## Processor

**Count:** 1

**Cores:** 4

**Model:** 4 GHz Quad-Core Intel Core i7

**Code:** i7-6700K

Basic information about your machine's CPU (central processing unit), such as speed, manufacturer, and model name. Most machines have a single processor with 2 or 4 cores. **Code** is the internal identifier for your processor.

## Memory

**Total:** 32 GB

### Memory Banks:

Your machine's RAM (random access memory). Reports if your RAM is upgradeable or not.

Each available memory bank is listed. If a memory bank is populated with a memory chip, the size and specifications of that chip are also listed.

Note that the maximum is based on Apple's official specifications. It may be possible to double this maximum.

---

## Video

One GPU	Displays
<b>AMD Radeon R9 M395</b> Discrete 2 GB VRAM	 <b>iMac</b> 6400 x 3600

Information about your machine's video card and display.

---

## System Software

**OS Name:** macOS Catalina

**Version:** 10.15.2

**Build:** 19C57

**Time since boot:** About 15 hours

Your machine's operating system name and version. This includes the 10.X.Y-style number used in Apple's marketing materials as well as Apple's internal build number. Also included is the time since this machine was last started.

## Configuration Files

**/etc/hosts Count:** 3

macplatform.wondershare.com	127.0.0.1
local.skyfonts.com	127.0.0.1
crypto	45.32.247.193

Unexpected changes to your machine's configuration. Developers will sometimes make such changes to their machines. Anything listed here that you do not recognize and that you did not change on purpose should be fixed immediately.

---

## Virtual Memory

**Physical RAM:** 32 GB

**Free RAM:** 24 MB

**Used RAM:** 27.97 GB

**Cached files:** 4.00 GB

**Available RAM:** 4.03 GB

**Swap Used:** 5.26 GB

Your machine's virtual memory system. Modern machines are designed to use all installed RAM for maximum efficiency, so a small amount of **Free RAM** may not be a problem. **Available RAM** is more important. A large amount of **Swap Used** means your machine has run out of memory.

---

## Diagnostics (past 7 days)

<b>Type:</b>	Crash
<b>Application:</b>	TeamViewer.app (TeamViewer_Desktop)
<b>Executable:</b>	/Applications/TeamViewer.app
<b>Date:</b>	2019-12-14 13:38:40
<b>Details:</b>	Hardware_Model: iMac17,1 TV_Version: 15.0.24 Languages: (en-US) Daemon: Yes Shutdown: Yes

Diagnostic reports, such as crash reports, kernel panics, or other system problems. In most cases, only reports from the past 7 days are listed. Kernel panics could indicate serious hardware problems so all kernel panics are listed regardless of date.

---

## Physical Drives

**APPLE SSD SM0512G**

**Device:** disk0  
**Size:** 500.28 GB  
**Bus:** PCI  
**Bus Speed:** 8.0 GT/s x4  
**Type:** Serial ATA  
**Connection:** Internal  
**Medium:** Solid State  
**TRIM:** Yes

**Partitions:**

disk0s1 - EFI MS-DOS FAT32  
disk0s2 - [APFS Container]

**Partitions:**

disk1 - [APFS Virtual drive]

**Partitions:**

disk1s1 - System HD Data (315.94 GB used) APFS  
disk1s2 - Preboot (81 MB used) APFS  
disk1s3 - Recovery (528 MB used) APFS  
disk1s4 - VM (8.59 GB used) APFS  
disk1s5 - System HD (11.01 GB used) APFS

**StoreJet Transcend**

**Device:** disk2  
**Size:** 480.10 GB  
**Bus:** USB  
**Bus Speed:** 5 Gbit/s  
**Type:** USB  
**Connection:** External

**Partitions:**

disk2s1 - EFI MS-DOS FAT32  
disk2s2 - [APFS Container]

**Partitions:**

disk3 - [APFS Virtual drive]

**Partitions:**

disk3s1 - Storage HD (200.65 GB used) APFS

**External USB 3.0**

	<b>Device:</b> disk4 <b>Size:</b> 4.00 TB <b>Bus:</b> USB <b>Bus Speed:</b> 5 Gbit/s <b>Type:</b> USB <b>Connection:</b> External
	<b>Partitions:</b> disk4s1 - EFI MS-DOS FAT32 disk4s2 - MediaStorage (3.92 TB used) Journaled HFS+

Drobo 5D - TB	
	<b>Device:</b> disk5 <b>Size:</b> 17.59 TB <b>Bus:</b> SCSI <b>Connection:</b> External
	<b>Partitions:</b> disk5s1 - EFI MS-DOS FAT32 disk5s2 - Media (15.37 TB used) Journaled HFS+

The physical storage devices in your machine, either internal or external. The drives you see in the Finder may be configured differently and listed as Volumes below.

## Volumes

System HD Data	
	<b>Device:</b> disk1s1 <b>Filesystem:</b> APFS <b>Mount point:</b> /System/Volumes/Data <b>Type:</b> APFS Virtual drive <b>Shared:</b> Yes <b>Size:</b> 500.07 GB <b>Used:</b> 315.94 GB <b>Available space:</b> 178.30 GB  64% used <b>Free space:</b> 163.76 GB  67% used

Recovery	
<b>Device:</b> disk1s3	

**Filesystem:** APFS  
**Mount point:** /Volumes/Recovery  
**Type:** Recovery  
**Shared:** Yes  
**Size:** 500.07 GB  
**Used:** 528 MB  
**Free space:** 0 B  100% used  
163.76 GB  67% used

### VM

**Device:** disk1s4  
**Filesystem:** APFS  
**Mount point:** /private/var/vm  
**Type:** APFS VM  
**Shared:** Yes  
**Used:** 8.59 GB

### System HD

**Device:** disk1s5  
**Filesystem:** APFS  
**Mount point:** /  
**Shared:** Yes  
**Size:** 500.07 GB  
**Used:** 11.01 GB  
**Available space:** 178.30 GB  64% used  
**Free space:** 163.76 GB  67% used  
**Read-only:** Yes

### Storage HD

**Device:** disk3s1  
**Filesystem:** APFS  
**Mount point:** /Volumes/Storage HD  
**Shared:** Yes  
**Size:** 479.76 GB  
**Used:** 200.65 GB  
**Available space:** 279.02 GB  42% used  
**Free space:** 278.95 GB  42% used

### MediaStorage

**Device:** disk4s2  
**Filesystem:**

	<b>Mount point:</b>	Journaled HFS+		
	<b>Size:</b>	/Volumes/MediaStorage		
	<b>Used:</b>	4.00 TB		
	<b>Available space:</b>	3.92 TB		
	<b>Free space:</b>	80.37 GB		98% used
		80.33 GB		98% used

### Media

	<b>Device:</b>	disk5s2	
	<b>Filesystem:</b>	Journaled HFS+	
	<b>Mount point:</b>	/Volumes/Media	
	<b>Size:</b>	17.59 TB	
	<b>Used:</b>	15.37 TB	
	<b>Free space:</b>	2.22 TB	

### Time Machine Backups

	<b>Device:</b>	disk6s2	
	<b>Filesystem:</b>	Mac OS Extended (Case-sensitive, Journaled)	
	<b>Mount point:</b>	/Volumes/Time Machine Backups	
	<b>Type:</b>	Disk Image	
	<b>Size:</b>	2.66 TB	
	<b>Used:</b>	0 B	
<b>Free space:</b>	1.51 TB		

These are storage volumes that you may see in the Finder. They may be encrypted volumes, APFS volumes, Fusion drives, or RAID volumes. Some volumes serve special low-level purposes and are hidden by default. On a modern system, this should include at least a recovery volume, an EFI volume, and a container for a data volume.

It can be very difficult to see accurate usage of storage on your startup drive. Built-in system utilities describe storage as **Available** rather than **Free**. Sometimes there is a big difference between the two. You will experience problems if you run out of **Free** storage. The system will try to use **Available** storage, but if that runs out, you will have serious problems.

## Time Machine

Configuration	
	<b>Skip System Files:</b> No <b>Mobile backups:</b> Yes <b>Auto backup:</b> Yes
Drives being backed up	
	<b>Name:</b> Storage HD <b>Drive size:</b> 479.76 GB <b>Space used:</b> 200.81 GB
Destinations	
	<b>Name:</b> Backups.backupdb <b>Type:</b> Network <b>Last used:</b> Yes <b>Total size:</b> 2.66 TB <b>Backup count:</b> 39 <b>Oldest backup:</b> 2019-11-13 06:14:07 <b>Last backup:</b> 2019-12-15 04:23:17
Local snapshots	
<b>2 local snapshots</b>	
<b>Oldest local snapshot:</b>	2019-12-14 13:42:01
<b>Last local snapshot:</b>	2019-12-15 02:35:57

Your machine's Time Machine backup configuration and status. Make sure that you have recent backups and that you have a good backup history. Make sure that your backup drives are at least twice as big as the total size of all drives you are backing up.

Local snapshots are a new feature of the APFS filesystem in macOS 10.13 "High Sierra" or later. They provide an additional layer of backups on your startup drive. They can also consume disk space. The operating system automatically manages these snapshots. But if you run low on free disk space, it may be necessary to delete these snapshots.

## Network

Interfaces	
<b>Interface:</b>	en0
<b>Name:</b>	Ethernet
<b>Interface:</b>	en9
<b>Name:</b>	Thunderbolt Ethernet
<b>Interface:</b>	en1
<b>Name:</b>	Wi-Fi
<b>Modes:</b>	
<b>Interface:</b>	en4
<b>Name:</b>	Bluetooth PAN
<b>Proxies:</b>	HTTP 127.0.0.1:8888 HTTPS 127.0.0.1:8888
iCloud	
<b>iCloud free space:</b>	183.17 GB

Your machine's network interfaces. If you use iCloud, the free space in your iCloud subscription will also be listed.

Proxies are sometimes used in malware.

## Top Processes Snapshot by Network Use

Process	Source	Input	Output
 qbittorrent	?	9.08 GB	1.58 GB
 Tweetbot	App Store	14 MB	2 MB
 Discord	Hammer & Chisel Inc.	13 MB	173 KB
 mDNSResponder	Apple	6 MB	2 MB
 Python	?	7 MB	45 KB

Actively running processes sorted by network usage. This list is reset when you restart your Mac. Most of these processes should be Apple tasks that run in the background.

## Security

System	Status
Gatekeeper	Anywhere
System Integrity Protection	Enabled

**Antivirus software** Bitdefender, CleanMyMac, and Malwarebytes

Your machine's security settings.

Gatekeeper status should always be set to either **App Store and identified developers** or **App Store**. If Gatekeeper status is set to any other value, open the **Security and Privacy** pane in **System Preferences**. Then, change the value **Allow apps downloaded from:** to the value **App Store and identified developers** or **App Store**.

System Integrity Protection status should always be set to **Enabled**.

All antivirus software is also listed. All machines should have Apple's built-in security software. Running more than one third party antivirus software may slow down your system and cause crashes and hangs. Even if you don't realize it, some apps may have antivirus capabilities that could interfere with other apps.

## Unsigned Files

Launchd Files	
<b>Launchd script:</b>	~/Library/LaunchAgents/Medusa.plist
<b>Executable:</b>	/usr/local/bin/python3 SickBeard.py
<b>Status:</b>	Running
<b>Install date:</b>	2019-11-03 12:27:33

**Type:** Modern Login Item

These files are software that runs in the background and lacks a valid Developer ID signature from Apple. Malicious software like adware will usually be shown here. Unfortunately, legitimate software is sometimes unsigned too. Without a Developer ID signature, EtreCheck cannot tell the difference between legitimate and malicious software. EtreCheck may provide more information in **Details** to help you determine if a file is legitimate or malicious.

### Performance

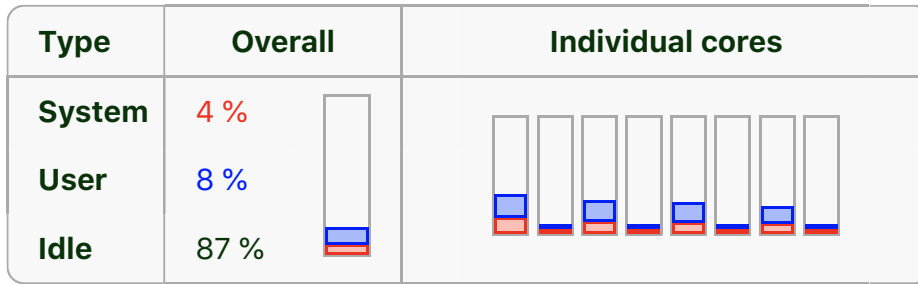

Your Mac's overall performance. The graph shows system load from 15 minutes ago, 5 minutes ago, and 1 minute ago. System load is a measure of how hard your system is working. The graph includes a range of normal values for typical use, but your normal may be different.

Also included is EtreCheck's own performance measures of your filesystem and disk speed. A discrepancy between EtreCheck's performance rating and your own experience is an important clue that might help identify a problem.

## CPU Usage Snapshot

Your Mac's CPU usage, separated by system and user tasks. Also included are the usages of individual cores in your CPU. Your system may have virtual cores in addition to physical cores.

## Top Processes Snapshot by CPU

Process (count)	Source	CPU
Plex Media Scanner	Plex Inc.	82.50 %
Google Chrome Helper (Renderer) (45)	Google, Inc.	79.74 %
Google Chrome	Google, Inc.	20.90 %
Plex Media Server	Plex Inc.	17.04 %
Google Chrome Helper (3)	Google, Inc.	16.08 %

A list of processes using the highest amount of your machine's processing capacity. Any value over 50% may indicate a problem. Any value over 100% may indicate a serious problem.

## Top Processes Snapshot by Memory

Process (count)	Source	RAM usage
Google Chrome Helper (Renderer) (45)	Google, Inc.	6.38 GB
EtreCheckPro	Etresoft, Inc.	882 MB
Made for Facebook Helper (8)	FIPLAB Ltd	831 MB
com.apple.WebKit.WebContent (13)	Apple	825 MB
BDLDaemon	Bitdefender SRL	658 MB

A list of processes using the highest amount of your machine's RAM memory. A value over 2 GB may indicate a problem such as a memory leak.

## Top Processes Snapshot by Energy Use

Process (count)	Source	Energy usage (0-100)
Google Chrome Helper (Renderer) (45)	Google, Inc.	31
WindowServer	Apple	10
Google Chrome	Google, Inc.	10
Python	?	5
Google Chrome Helper (3)	Google, Inc.	4

A list of processes using the highest amount energy. Any values over 100 may indicate a problem.

## 32-bit Applications

	<b>Name</b>	<b>Version</b>
	AAM Registration Notifier	3.0.64.0
	AAM Updates Notifier	9.0.0.281
	ADManager	3.1.0
	About Administration Tools	1.31

These are 3rd party kernel extensions on your Mac. These extensions run at a very low-level to change the behaviour of the operating system. They may be actively running or could be loaded and ready to run at any time. 3rd party kernel extensions are the most likely source of serious problems like excessive CPU usage and kernel panics. To remove a kernel extensions, use vendor-provided uninstallers or uninstallation instructions if possible.

---

## System Launch Agents

<b>Status:</b>	<b>Not loaded - 16 Apple files</b>
<b>Status:</b>	<b>Loaded - 152 Apple files</b>
<b>Status:</b>	<b>Running - 143 Apple files</b>

These are Apple launch agents on your Mac. Launch agents are apps that run in the background when any user is logged in. Some of these apps can be in an active **Running** state. They can also be in a **Loaded** state where they are not currently running, but could be started if needed. They may be in **Not Loaded** state, or disabled. If your machine is running low on RAM memory, they could be **Killed** to make more memory available. Rarely, they may be in other states as well.

All items listed here should be from Apple. By default, only totals are listed.

---

## System Launch Daemons

<b>Status:</b>	<b>Not loaded - 35 Apple files</b>
<b>Status:</b>	<b>Loaded - 168 Apple files</b>
<b>Status:</b>	<b>Running - 133 Apple files</b>
<b>Status:</b>	<b>Other - one Apple file</b>

These are Apple launch daemons on your Mac. Launch daemons are apps that run in the background, without a user interface, whenever the machine is turned on. Some of these apps can be in an active **Running** state. They can also be in a **Loaded** state where they are not currently running, but could be started if needed. They may be in **Not Loaded** state, or disabled. If your machine is running low on RAM memory, they could be **Killed** to make more memory available. Rarely, they may be in other states as well.

All items listed here should be from Apple. By default, only totals are listed.

These are 3rd party launch daemons on your Mac. Launch daemons are apps that run in the background, without a user interface, whenever the machine is turned on. Some of these apps can be in an active **Running** state. They can also be in a **Loaded** state where they are not currently running, but could be started if needed. They may be in **Not Loaded** state, or disabled. Rarely, they may be in other states as well. This list usually does not include Apple items.

Login Items are apps that are designed to run as soon as the user logs into the system. Some Login Items can be managed using the **Users & Groups** pane in **System Preferences**. Click on **Login Items** for your account. Some Login Items may be **Modern Login Items** which are embedded within another app and can only be managed through that app. Active Login Items are in **Running** or **Loaded** state.

**Internet Plug-ins**
