Hello Tim,

If we see more than 80 connections within 10 seconds of each other, our Security Team will notice us and the IP space could be blocked.

Hello,

I sent the following email to the NHC who advised I contact you:

I'm writing a program that scrapes the National Hurricane Center website for storm data. I was unable to find any documentation that states limits on performing this type of activity; particularly simultaneous requests.

Is there a limit to the number of requests from a specific IP address within a given period of time? If so, can you please advise what they are?

Thank you,

Tim Trice

Hi Tim,

Thank you for contacting the National Hurricane Center. The technical side of the NHC website is handled by the NOAA Web Operations Center, so they can probably answer your question better than I can. That said, I'm not aware of any restrictions.

<http://www.woc.noaa.gov/>

Best Regards.

David Zelinsky
